

ABOUT ME

Final-year ECE student with a CS minor at PES University, focused on data and business analytics, SQL engineering, and BI reporting. Skilled in transforming raw data into insights through Power BI dashboards and SQL data modeling. Aiming to add value to data and business teams through analytical problem solving, data visualization, and process optimization.

EXPERIENCE AND PROJECTS

Research Intern in L&T funded project

- Analyzed sensor and performance data (LiDAR, IMU, encoder feedback) to evaluate localization accuracy, motion efficiency, and system reliability.
- Conducted benchmarking and comparative analysis of industrial components to support cost optimization and design decisions.
- Applied structured problem-solving to identify system bottlenecks and improve navigation and operational efficiency.

Artificial Intelligence intern (AI) – June 2025 – August 2025

- Worked in a virtual internship as an AI intern, where I built and automated the workflow using Agentic AI.
- We trained various ML models and built AI systems to perform multiple tasks, improving performance to around 85%.

Sales Analytics Dashboard – Power BI & SQL

Data Analytics Project

- Built an interactive Power BI dashboard to analyze sales performance, customer trends, and product category insights using the AdventureWorksDW2022 dataset.
- Extracted, transformed, and modeled data with SQL and SSMS; designed relationships, created DAX measures, and implemented KPI cards for sales vs budget variance tracking.
- Developed dynamic visualizations including Top 10 customers/products, monthly sales trends, category distribution charts, and geographic sales mapping with slicer filters.
- Delivered a decision-support analytics solution enabling faster revenue monitoring, high-value customer identification, and data-driven budgeting improvements.

Product Segmentation – Python & K-Means

Data Analytics Project

- Performed product-level segmentation on sales data using Python, Pandas, and K-Means clustering.
- Aggregated transaction data to compute product metrics (e.g., total sales, quantity, average values) and standardized features with `StandardScaler`.
- Identified distinct product clusters and visualized them with Matplotlib to compare sales performance patterns across groups.
- Generated insights useful for prioritizing high-performing products and identifying low-engagement segments for targeted strategies.

EDUCATION

PES University, Bengaluru, Karnataka

2022 – 2026

B.Tech in Electronics and Communication (Major) with Minors in Computer Science

NRI Junior College, Guntur

2020 – 2022

Andhra Pradesh Board of Education

SKILLS

Programming Languages: Python (Pandas, NumPy, Matplotlib) , SQL, C, C++, JavaScript

Frameworks & Libraries: React.js, Node.js, Flask

Tools & Technologies: PowerBI, AI, MySQL, Git, VS Code, Unreal Engine, GODOT, Microsoft tools, Excel (Pivot Tables, VLOOKUP, Power Query), Fusion 360, SolidWorks, ROS

Soft Skills: Product Life Cycle(PLC), PRD, Team work, Leadership, Communication, Problem solving, Creativity, Innovation, Dashboarding, Business Understanding, Research.

CORE COMPETENCIES

Problem Solving — Data Structures & Algorithms — DBMS — Full-Stack Development — Schema interpretation
Team Collaboration — Innovation — Communication — Debugging & Testing — Version Control — Data Modeling

ADDITIONAL INFORMATION

Hobbies: Solving puzzles, game development, space technology, financial analysis, sports, drawing, traveling, and Amazon affiliate marketing.
